Microwave Engineering II  
University of Massachusetts Amherst  
ECE 585

Instructor  Do-Hoon Kwon  
Office  Marcus Hall 215A  
Department of Electrical and Computer Engineering  
E-mail  dhkwon@umass.edu  
Class meetings  MoWeFr 12:20–1:10PM  
Room  Marston 211  
Office hour  We 2:00–3:00PM and by appointment @ Marcus 215A

Course Objectives  
In this course, students should acquire the following skills. He/She should be able to:  
1. Understand the theoretical principles underlying microwave devices and networks  
2. Design microwave components such as power dividers, hybrid junctions, microwave filters, ferrite devices, and single-stage microwave transistor amplifiers  
3. Improve skills in written communication, through a project report  
4. Understand and quantify the effects of noise characteristics of microwave systems  
5. Quantify the signal and noise characteristics of microwave systems, and relate them to the design process

Prerequisites  
ECE 584, Microwave Engineering I or equivalent

Course Requirements  
Graded homeworks, one CAD filter design project, one midterm exam, and a final exam.

Grading Policy  
<table>
<thead>
<tr>
<th>Component</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Homework</td>
<td>20 %</td>
</tr>
<tr>
<td>Filter Design Project</td>
<td>10 %</td>
</tr>
<tr>
<td>Midterm Exam</td>
<td>35 %</td>
</tr>
<tr>
<td>Final Exam</td>
<td>35 %</td>
</tr>
</tbody>
</table>
Homework assignments are due at the beginning of the class period on the due date. Late homeworks will NOT be accepted.

Course Topics
1. Power dividers, directional couplers (Ch. 7) [8 lectures]
   - T-junction power divider, Wilkinson power divider
   - Waveguide couplers, quadrature hybrid, coupled line directional couplers, Lange coupler
2. Microwave filters (Ch. 8) [11 lectures]
   - Periodic structures, image parameter method, insertion loss method
   - Filter transformations, filter implementation
   - Stepped-impedance low-pass filters, coupled line filters, filters using coupled resonators
3. Ferrimagnetic components (Ch. 9) [7 lectures]
   - Basic properties, plane-wave propagation in a ferrite medium
   - Ferrite-loaded rectangular waveguide, ferrite isolators, ferrite phase shifters
4. Noise and distortion (Ch. 10) [7 lectures]
   - Noise in microwave circuits, dynamic range, intermodulation distortion
   - RF diode characteristics
5. Amplifier basics (Ch. 11) [6 lectures]
   - Two-port power gains, stability
   - Design for maximum gain, design for specified gain, low-noise amplifier design

Computer Requirements
Computer tools may be used for design problems in homework assignments. Keysight ADS or any other equivalent microwave software package may be used.

Program Outcomes
For undergraduate majors taking this course, the five objectives are related in part to ten broad capabilities (ABET Program Outcomes) that we expect for all our BS graduates in the EE and CSE programs. These are related as shown in the table below.

<table>
<thead>
<tr>
<th>Program Outcomes</th>
<th>Course Objective</th>
<th>1</th>
<th>2</th>
<th>3</th>

**Inclusivity Statement**

The diversity of the participants in this course is a valuable source of ideas, problem solving strategies, and engineering creativity. If you feel that your contribution is not being valued for any reason, please speak with me privately. If you wish to communicate anonymously, you may do so in writing, speak with Assistant Dean Paula Rees (rees@umass.edu, 413.545.6324, Community Equity and Inclusion (CEI) Hub Marcus 128b), or submit your concern through the College or Engineering Climate Concerns and Suggestions on-line form (tinyurl.com/UMassEngineerClimate). We are all members of an academic community where it is our shared responsibility to cultivate a climate in which all students/individuals are valued and where both they and their ideas are treated with respect.
